Database of national HIV and TB guidelines, 2005-2011

WHO HIV and TB guidelines and policies are developed for a global audience. It is expected that regions and countries adapt the recommendations according to their respective HIV and TB epidemics, the strengths and weaknesses of their health systems, the availability of financial, human and other essential resources.

In adapting the guidelines, countries should exercise care to avoid undermining existing programmes, to protect access for the most at-risk populations and to achieve the greatest impact for the greatest number of people and ensure sustainability. WHO has also developed an adaptation guide to assist the countries in adapting WHO HIV policies and guidelines to their own contexts.
